## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Arun is working on a project to automate the process of determining whether a student has passed or failed based on their subject marks.

He aims to create a simple program that takes positive integers as marks for five subjects from the user. If the average of the marks is greater than or equal to 50, the student has passed the exam. Otherwise, the student has failed.

Help Arun to implement the project.

##### ***Input Format***

The input consists of five space-separated integers, representing the marks in five subjects.

### ***Output Format***

The first line of output prints "Average score: " followed by an integer representing the average score.

The second line prints one of the following:

1. If the condition is satisfied, print "The student has passed".
2. Otherwise, the output prints "The student has failed".

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 50 60 70 80 90

Output: Average score: 70

The student has passed

### ***Answer***

```
import java.util.Scanner;

class Main{
    void evaluate(int m1, int m2, int m3, int m4, int m5){
        int avg;
        avg = (m1+m2+m3+m4+m5)/5;
        System.out.println("Average score: "+ avg);
        if(avg>=50){
            System.out.println("The student has passed");
        }
        else{
            System.out.println("The student has failed");
        }
    }
    public static void main(String[] args){
        int a, b, c, d, e;
        Main mn = new Main();
        Scanner sc = new Scanner(System.in);
        a = sc.nextInt();
        b = sc.nextInt();
        c = sc.nextInt();
    }
}
```

```
        d = sc.nextInt();
        e = sc.nextInt();
        mn.evaluate(a, b, c, d, e);
    }
}
```

**Status :** Correct

## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q2

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Samantha is a diligent math student who is exploring the world of programming. She is learning Java and has recently studied conditional statements. One day, her teacher gives her an interesting problem to solve, which takes a number as input and checks whether it is a multiple of 5 or 7.

Help her complete the task.

##### ***Input Format***

The input consists of a single integer N, representing the number to be checked.

##### ***Output Format***

If the number is a multiple of 5 but not 7, the output prints "N is a multiple of 5".

If the number is a multiple of 7, the output prints "N is a multiple of 7".

Otherwise the output prints "N is neither multiple of 5 nor 7" where N is an entered integer.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 10

Output: 10 is a multiple of 5

### **Answer**

```
import java.util.Scanner;
```

```
class Main{
    public static void main(String[] args){
        int n;
        Scanner sc = new Scanner(System.in);
        n = sc.nextInt();
        if(n%5==0){
            System.out.println(n+" is a multiple of 5");
        }
        else if(n%7==0){
            System.out.println(n+" is a multiple of 7");
        }
        else{
            System.out.println(n+" is neither multiple of 5 nor 7");
        }
    }
}
```

### 2028\_REC\_OOPS using Java\_Week 2\_Q3

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

John is a fitness trainer, and he wants to use the BMI calculator to assess the body mass index of his clients. He has a list of clients based on their height and weight.

John plans to write a program to quickly determine the BMI and provide a classification for each client.

If BMI is less than 18.5, the program will classify it as "Underweight" If BMI is between 18.6 and 24.9, the program will classify it as "Normal Weight" If BMI is between 25.0 and 29.9, the program will classify it as "Overweight" If BMI is 30.0 or higher, the program will classify it as "Obese"

Note: Formula to calculate BMI = weight/(height\*height)

***Input Format***

The first line of input consists of a double value, representing the height of the person in meters.

The second line consists of a double value, representing the weight of the person in kilograms.

### ***Output Format***

The first line of output prints "BMI: " followed by a double (rounded to two decimal places) representing the calculated BMI.

The second line prints "Classification: " followed by a string indicating the BMI category (Underweight, Normal Weight, Overweight, or Obese).

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 1.2

45.2

Output: BMI: 31.39

Classification: Obese

### ***Answer***

```
import java.util.Scanner;

class Main{
    public static void main(String[] args){
        double wt, ht;
        float bmi;
        Scanner sc = new Scanner(System.in);
        ht = sc.nextDouble();
        wt = sc.nextDouble();
        bmi = (float)wt/(float)(ht*ht);
        System.out.printf("BMI: %.2f\n", bmi);
        if(bmi<18.5){
            System.out.println("Classification: Underweight");
        }
        else if(bmi>18.5 && bmi<24.9){
            System.out.println("Classification: Normal Weight");
        }
    }
}
```

```
        else if(bmi>=25 && bmi<29.9){  
            System.out.println("Classification: Overweight");  
        }  
        else if(bmi>=30){  
            System.out.println("Classification: Obese");  
        }  
    }  
}
```

## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q4

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Amit wants to evaluate the depreciation of his car over time to understand its current value and categorize it based on that value.

Write a program that helps him determine the current value of his car after a certain number of years of depreciation and classify it into one of three categories:

High: If the current value is greater than 10,000. Medium: If the current value is between 5,000 and 10,000, both inclusive. Low: If the current value is less than 5,000.

The depreciation rate of the car is 15% per year. The program should calculate the current value of the car after applying this depreciation over the given number of years and print the current value along with the category.

### ***Input Format***

The first line of input consists of an integer, representing the initial cost of the car.

The second line consists of an integer, representing the number of years the car has been depreciating.

### ***Output Format***

The first line of output prints a double value, representing the current value of the car, rounded off to two decimal places "Current Value: <value>".

The second line prints its category "Category: <categories>".

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 20000

5

Output: Current Value: 8874.11

Category: Medium

### ***Answer***

```
import java.util.Scanner;

class Main{
    public static void main(String[] args){
        int inp, yr;
        float cv, d;
        Scanner sc = new Scanner(System.in);
        inp = sc.nextInt();
        yr = sc.nextInt();
        cv = inp;
        for(int i = 0; i<yr; i++){
            cv*=0.85;
        }
        System.out.printf("Current Value: %.2f\n", cv);
        if(cv>10000){
            System.out.println("Category: High");
        }
    }
}
```

```
        }
        else if(cv<10000 && cv>5000){
            System.out.println("Category: Medium");
        }
        else{
            System.out.println("Category: Low");
        }
    }
}
```

## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

##### ***Input Format***

The input consists of an integer N, representing the number to be checked.

##### ***Output Format***

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

### ***Answer***

```
import java.util.Scanner;

class Main{
    public static void main(String[] args){
        int n, rem, cnt, sum, t;
        Scanner sc = new Scanner(System.in);
        n = sc.nextInt();
        t = n;
        cnt = sum = 0;
        while(t!=0){
            rem = t%10;
            sum +=rem;
            t/= 10;
            cnt++;
        }
        if(cnt == sum){
            System.out.println("The number of digits in "+ n +" matches the sum of its
digits.");
        }
        else{
            System.out.println("The number of digits in "+ n +" does not match the
sum of its digits.");
        }
    }
}
```

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Maya, a student in an arts and crafts class, wants to create a pattern using stars (\*) in a specific format. She plans to use a program to help her construct the pattern.

Write a program that takes an integer as input and constructs the following pattern using nested for loops.

Input: 5

Output:

\*  
\*\*

## *Input Format*

The input consists of a number (integer) representing the number of rows.

## *Output Format*

The output displays the required pattern.

Refer to the sample output for the formatting specifications.

## **Sample Test Case**

Input: 5

Output: \*

\*\*

\*\*\*

\*\*\*\*

\*\*\*

\*\*

\*\*

\*

## Answer

```
import java.util.Scanner;
```

```
class Main{  
    public static void main(String[] args){  
        int n;
```

```
Scanner sc = new Scanner(System.in);
n = sc.nextInt();
for(int i = 0; i<=n; i++){
    for(int j = 0; j<i; j++){
        System.out.print("* ");
    }
    System.out.println();
}

for(int i = n-1; i>0; i--){
    for(int j = i; j>0; j--){
        System.out.print("* ");
    }
    System.out.println();
}
```
